Explore Louisiana's Health Data Portal

The Louisiana Department of Health (LDH) Office of Public Health's (OPH) mission is to protect and promote the health and wellness of all individuals and communities in Louisiana. In support of this mission, this data portal was developed to enable health, environmental, population and exposure information and data to be viewed and analyzed in one place. The portal reflects the vision and core values of OPH: to demonstrate transparency by making quality health data available and to employ and promote science-based best practices towards continuous improvement.

Data within the portal are interactive, and they can be searched and viewed by topic in various formats, such as tables, graphs and maps. Quick access is also provided to associated information and links, and the data displays, which have been carefully designed and reviewed by a panel of health experts and geographers, allow various datasets to be explored geographically and over time.

The OPH Bureau of Health Informatics (BHI) and U.S. Centers for Disease Control and Prevention (CDC) National Tracking Network, through LDH's Tracking Program, have partnered to provide a broad range of indicators and measures to the public, health officials, practitioners, researchers, scientists and decision makers. Agency health data can be viewed across disciplines, including the Nationally Consistent Data and Measures (NCDM) format promoted by the National Tracking Program.

Acknowledgements

This site was funded through a partnership of LDH's OPH and CDC Tracking, Cooperative Agreement Grant 6 N01EH001358-01-01.

HEALTH INDICATORS

- Adult Obesity
- Diabetes
- **Asthma**
- Birth Defects
- Birth Outcomes
- Cancer
- Childhood Disabilities
- **Chronic Obstructive Pulmonary Disease**
- **Heart Attack**
- Heat Illness
- Injury
- Immunization
- **Occupational Health**

ENVIRONMENTAL INDICATORS

- Temperature
- Community Water Systems
- Carbon Monoxide Poisoning
- **Chemical Events**
- Fish Advisories
- **Outdoor Air Quality (measured and modeled)**
- Palmer Drought Severity
- **Wildfires**
